DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: On page 16, lines 6-8, the application number of the application being reference to as well as the filing data must be included or the reference to the application must be removed.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-9 and 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Gorniak et al (US 4,817,147).

Regarding claims 1-4, Gorniak discloses an intelligent synchronous modem on figures 1 and 4. A first port is connected to a primary communication channel for the communication of synchronous data and a second port is connected to a second communication channel for the communication of command data (column 3, line 51 to

Art Unit: 2631

column 4, line 15 and column 5, lines 11-20). It is deemed inherent the modem will contain a controller to execute the received commands.

Regarding claims 5-9, 14 and 15, it is deemed inherent that the personal computer will request the data received via the modem when the received information is to be processed by the personal computer.

Regarding claims 10-13, Gorniak further discloses data being sent from a remote unit to the modem is controlled by the microprocessor. In addition, a check is done to determine if the incoming information is subpar or the like (column 6, lines 43-68). The data must be saved for a period of time to allow this check to take place. Therefore, the data is saved in the modem.

Regarding claim 16, figure 2 shows a microprocessor coupled to the communication channels.

Regarding claims 17 and 18, Gorniak further discloses data being sent from a remote unit to the modem is controlled by the microprocessor. In addition, a check is done to determine if the incoming information is subpar or the like (column 6, lines 43-68). The data must be saved for a period of time to allow this check to take place. Therefore, the data is saved in the modem.

Regarding claim 19, Gorniak discloses the channel interface is a RS232C interface. Figure 1 discloses the transmitted data from the interfaces in parallel from a serial source.
